Today the 5th of the Islamic month of Jumada Al-Awsal is celebrated in the Islamic Republic of Iran as the “Day of the Nurse”, to honour the services to humanity of these noble women.

Today is that auspicious day in history when the virtuous lady that nursed Islam back to life was born. She was none other than the Heroine of Karbala, Hazrat Zainab (SA) – also known as Maleekat al-Sharq, the Mother of Martyrs.

The merits of Hazrat Zainab (SA), who gave her two young sisters, Amin and Fatima to nurse the ailing Imam Ali (AS) in Karbala, are an abiding testimony of the fact that her brothers Imaam Hasan (AS) and Imaam Hussein (AS) were the first nurses of the Islamic Revolution.

With the passing of time, the wise phrases born before the Omayyud rulers, said the realities and finer points of God-given intelligence and knowledge as more worthy than wealth, saying:

In view of this statement, it is knowledge that unravels all realities. In other words, for a Muslim, knowledge is the key that allows a Muslim to progress and to reach God’s bliss. It is through knowledge that a Muslim is able to fulfill the requirements God enjoins and to avoid His prohibitions.

Hazrat Zainab (SA) was immune from any ignorance and possessed God-given practical knowledge. The Iranian scholar Shahaboddin Abu Sufyan, historians, and other reliable historians have brought us the fact that her brothers Imaam Hasan (AS) and Imaam Hussein (AS) were the first nurses of the Islamic Revolution.

Her father Imaam Ali (AS) in his famous advice to his disciple Kumail ibn Yazid (the grandson of Imaam Al-Mahdi) has been quoted as saying:

Her 16 heroic firefighters, who lost their lives recently while trying to put off a massive blaze at a high-rise in Tehran, on Feb. 17, 2017.

The Exhibition of Space Achievements was held to mark the ninth National Day of Space Technology with the participation of Ministry of Science, Research, and Technology Mohammad Farhadi and Defense Minister Brigadier General Husein Dehghan.

During the ceremony, the domestically-designed Nahid (Venus) 1 telecommunications satellite, and student-manufactured Cube satellite were unveiled. Nahid 1 has been manufactured at Iran’s Space Research Center. Through its production, the country has sought to hone its capabilities in building geosynchronous satellites. The solar-powered satellite is designed to provide telecommunication and imaging services.

Among other achievements put on display were the surveillance-imaging Payam-e-Amirkabir satellite, designed and built by Iran’s Amirkabir University of Technology and Saman 1 Orbital Manned System, which can be used to change satellite orbit.

Speaking at the ceremony, the Leader (On Page 7) referred to her in [jurisprudential] matters related to the sanctioned and forbidden until death. Hazrat Zainab (SA) was the embodiment of practical knowledge. The Iranian scholar Shahaboddin Abu Sufyan, historians, and other reliable historians have brought us the fact that her brothers Imaam Hasan (AS) and Imaam Hussein (AS) were the first nurses of the Islamic Revolution.

In view of this statement, it is knowledge that unravels all realities. In other words, for a Muslim, knowledge is the key that allows a Muslim to progress and to reach God’s bliss. It is through knowledge that a Muslim is able to fulfill the requirements God enjoins and to avoid His prohibitions.
